

eSWITCH SPORTS LIGHTING CONTROLLERS FOR COUNCILS

eSwitch has been purpose-built to solve the various challenges Councils encounter with sports floodlighting and is delivering measurable and meaningful results to our existing local government clients. The online management system helps Councils to manage one, or dozens, of venues in a region and allows them to remotely operate the lights, introduce sustainability features, account for usage and manage venue hire with a simple mouse click.

HOW IT WORKS

Two components make up the eSwitch system. At the sports field a secure, weatherproof, vandal proof Control Box houses the electronic equipment and switching accessories.

eSwitch's online Application enables Council to manage all operations remotely via computer or smartphone. All settings and usage information are securely stored in the cloud.

Nominated third-party users can access the App via secure login and, with a simple press of a button, operate the floodlights with a simple click of a button.

POWERFUL FEATURES

- Central Online Dashboard to manage sporting sites
- Implement curfews and lockout times for each site
- Effortless creation of Club and User Logins
- Comprehensive reporting for accountability and billing
- Hassle-free management of third-party field/court hire.

USER ACCESS

Councils can manage and operate all sporting venues within their region via a central dashboard and a secure, **REGION MANAGER** login.

They are also able to delegate three different levels of access to the facilities depending on how much control they wish to provide to third parties. These access levels are 'Site Manger', 'Club Manger' and 'Club User'.

SITE MANAGERS can access all eSwitch features for their specific site only. This level of access is ideal for sports venues that are managed by a Lessee.

A CLUB MANAGER is the designated person within a specific Sports Club or User Group who has permission to operate the lights at the venue. Club managers can assign access to individual users within their club to operate the lights.

A CLUB USER can only access the light switches. The Site manager can restrict what switches the Club User has access to and when.

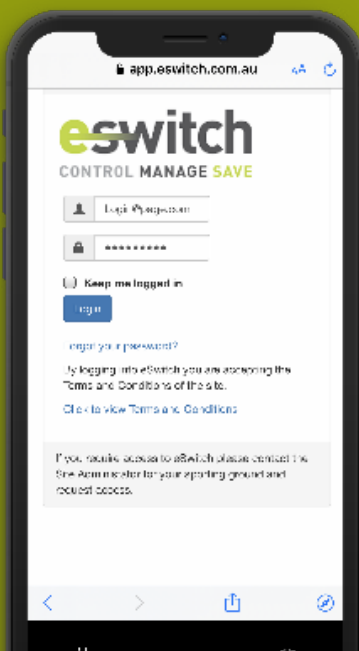

OPERATING COSTS

The Cloud Based operation system is delivered via a fixed price subscription service plus SMS costs, regardless of how many user accounts are created.

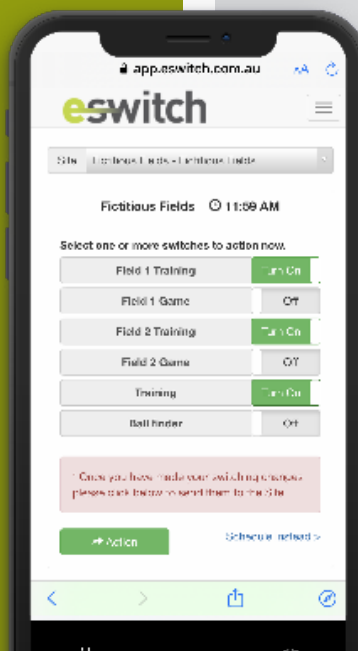

To ensure affordability, subscription costs have been kept to a minimum, averaging less than \$5 per week. Furthermore, our ability to bulk purchase SMS enables us to pass on considerable savings to our clients, with SMS switching operations charged at only 12 cents each.

With these costs combined, Council can operate eSwitch for approximately \$250 per year, per site. Aside from offering considerable convenience, eSwitch has proven cost savings generated by the introduction of accountability and a more sustainable use of field lights and the energy they consume. Managing Sports lighting with eSwitch can almost eliminate neighbour complaints and prove invaluable in resolving disputes.

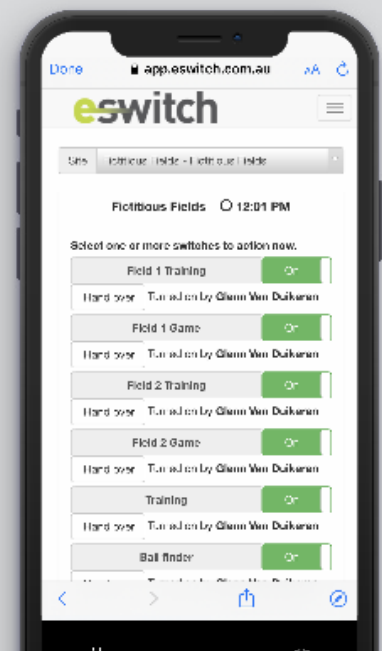

*Based on an average of 2 switching operations per night, 4 nights per week, 30 weeks per year.

Secure login in from any smartphone or computer

Turn field lights on and off from any location

Handover feature allows continuous use by multiple users
